ABSTRACT

My Fit Shop is a web store where I sell fitness equipment such as dumbbells, exercise mats, yoga mats, kettle bells, etc. The name comes from the idea that everyone should be able to achieve their goals through proper nutrition and exercise.

Many of them have been seen in our society that they never do exercise workout, due to which they have many health issues and to overcome that health issue, they have to take different types of medicines and then do exercise and it gets difficult. There can be many reasons for these people not exercising, some of which are the reason. They are short of money, then they cannot buy equipment, or the same equipment will go to waste later, there are many reasons for this.

In this we can get products and equipment delivered from factory at low prices and deliver products and equipment to customers at low prices as well as buy the products and equipment and give the support also

To overcome this problem, I make a website, in this any person can buy fitness related products and equipment's at a low price, as well as that product will be delivered quickly to customer home, so that he will be happy with his fitness related product as well as it see reviews about the fitness product

(keywords: products, fitness, prices, equipment, exercise, workout, product, mats, reasons, reasons, price.)

OBJECTIVE

Online Shopping is the process whereby consumers directly buy goods and services without any intermediary service over the internet. The goal of this website is to develop a web based interface for fitness, the website would be easy to use and hence the shopping experience pleasant for the users. The main goal of this website is:

I. To develop an easy to use web based interface where person can search for fitness products, view a complete description of the product and order the product.

II. A person can buy product from home.

III. A person get the product from factory to home delivery.

III. A person can get product with less period.

INTRODUCTION

E-commerce is fast gaining ground as an accepted and used business paradigm. More and more business houses are implementing web sites providing functionality for performing commercial transactions over the web. It is reasonable to say that the process of shopping on the web is becoming common place.

The purpose of creating this project is that fitness related products and equipment can be delivered by the factory directly to the customer's home at low prices in the shortest possible time.

To make this website I have used front end development programming which has three parts HTML CSS and JavaScript using of this three languages this websites are only for show purpose because of it not have back end development part and also not have any server for that.

There is not much challenge in making this project, but some challenges are such that it cannot be overcome without research and reading, such as not knowing some properties inside CSS, Same class using in element have same property of CSS and the ID of each element is different and many more like this. The major components of the project are **home, contact, about, account, add to cart, product.**

METHODOLOGY

It has been seen that many people who do not have money and even if they do not invest in their fitness, due to this many problems related to their health come and they have to eat a lot of medicines and then do workouts it becomes very difficult.

There are 2 parts to make this website, the frontend is used in the first part and the backend is used in the second part, but I have used only the frontend, inside which three more languages are used, the first one is in HTML by use of this create the skeleton of the website is made, the second language works on its look of website with CSS and the third language JavaScript to adds extra features on top of it, and using all these three languages only the website has been shown well from above as well as have also used bootstrap framework.

Any customer who wants to buy fitness related products using this website will be delivered to their doorstep by the factory at low prices in a short time so that the person who was not buying the product thinking that its cost is high He can easily buy the product.

I did this design choose because it looks very nice to see and its look is also good and also it has some animations so that no customer will board from that website and also have multiple pages like **home, contact, about, account, add to cart, product.**

I choose this method because it was so simple and easy that even for beginner can understand it. There are many methods to make this website like by coding which I have used secondly by using apps which only provide option to design graphically but the code which those apps provide are not easy to read Maybe because its content is too much and at the same time it is very difficult .so I choose the coding method because it is simple and understandable and others can understand easily.

As I mentioned above, there are two parts to make this website, out of which I have used only one part, which inside have three parts, which is HTML, CSS and JavaScript, in which I have given 70% of HTML 20% of CSS and 10% of Java script used but I not use back and part because of I not have a proper knowledge about that.

There is not much challenge in making this project but some challenges are come like how to write media queries and such as not knowing some properties inside CSS, Same class using in element have same property of CSS and the ID of each element is different and many more like this.

Conclusion

Many of them have been seen in our society that they never do exercise workout, due to which they have many health issues and to overcome that health issue, they have to take different types of medicines and then do exercise and it gets difficult. There can be many reasons for these people not exercising, some of which are the reason.

It is reasonable to say that the process of shopping on the web is becoming common place. The purpose of creating this project is that fitness related products and equipment can be delivered by the factory directly to the customer's home at low prices in the shortest possible time.

To make this website I have used front end development programming which has three parts HTML CSS and JavaScript using of this three languages this websites are only for show purpose because of it not have back end development part and also not have any server for that. The major components of the project are home, contact, about, account, add to cart, product.
